

Supplement of

Biotite supports long-range diffusive transport in dissolution–precipitation creep in halite through small porosity fluctuations

Berit Schwichtenberg et al.

- Supplementary
 - S1 Animation of effective DPC along NaCl-Bt grain boundary with progressing compaction of the sample (SBS).gif
 - S2 Exemplary correlation success of three consecutive datasets
 - * Animation of the correlation status of the first correlation pair (18 - 62 h) in the pure NaCl sample.avi
 - * Animation of the correlation status of the first correlation pair (19 - 59 h) in the SB sample.avi
 - * Animation of the correlation status of the first correlation pair (28 - 67 h) in the SBS sample.avi
 - * Animation of the correlation status of the last correlation pair (1343 - 1619 h) in the SBS sample.avi
 - * Animation of the correlation status of the last correlation pair (1365 - 1932 h) in the SB sample.avi
 - * Animation of the correlation status of the last correlation pair (512 - 1089 h) in the pure NaCl sample.avi
 - * Explanation of correlation status in videos.pdf
