

Interactive comment on “First experimental evidence for the CO₂-driven origin of Stromboli’s major explosions” by A. Aiuppa et al.

M. J. Heap (Editor)

heap@unistra.fr

Received and published: 9 July 2011

Dear Prof. Alessandro Aiuppa,

Both reviewers have responded to your article favourably. Further, they have both raised interesting points that will no doubt help to improve the manuscript. In my opinion, you have successfully answered all of their queries and comments. We look forward to your revised manuscript. If the promised changes are appropriately woven into the text, I can see no reason as to why your manuscript cannot be accepted as a Solid Earth article.

Thanks for your interest in Solid Earth,

Mike Heap EOST, Strasbourg
