Received and published: 26 January 2012

Dear Euan et al.

I have now carefully read through all the comments and replies for your manuscript "The Regulation of the Air: a hypothesis". You have certainly spent a considerable amount of time answering the replies and I am certain you will provide an equal amount of attention on a revised version, which I hope will be submitted soon. If you take into account all the comments on your manuscript I see no reason why it should not be published.

Yours Sincerely

Darren
