The anonymous reviewer probably did not read the whole paper. Statistical evaluation of sidereal LOD variations in relation to earthquakes is certainly new regardless that for the proof the newest earthquakes of the 2010–2011 period were used. Nevertheless also older earthquakes related to LOD are so far interesting that I believe the Figs 3b and 3c showing the exact periodicity of the Great Sumatra earthquake 2004 in 19 years of the Meton’s cycle will appear in basic geophysical text books.
