Received and published: 30 October 2012

Changes have been marked in green.

Main comments: -We have added a citation as example for National Inventories Reports published by UNFCC. However, reports are required by the Kyoto Protocol, but not all countries have used exactly the same methodologies. We have provided the citation for the Spanish National report. -We have provided a citation of previous uses of the formula used for C stock calculation. -The mapping process was not interpolation, as the information was vectorial. So, the analyses required for validation of interpolation methods as kriging or regressions are not necessary here. Carbon contents were computed for each polygon, not to grid areas. We suppose that other comments by Referee #1 are concerning this issue. But no interpolation was used

C596

during the process.
