Changes to "An experimental study of pyroxene crystallization during rapid cooling in a thermal gradient: application to komatiites" by Bouquain et al.

1. We removed all mention to chondrites, from the title and the text, because it is not clear how the results of our experiments relate to them 2. We provided some information about the procedure used during the electron microprobe analyses 3. We made minor change to the writing in several parts of the text.
