Dear Solid Earth CO editor, We would like to thank Prof.Dr. Harald Furnes for his comments. We complete his special comments. -We have presented brief information related Ankara mélange in the Introduction, -Sakarya Continent has been shown on the map of Fig.1, - We have presented a generalized tectonostratigraphic column, - We want to state that the lamprophyric dikes and a syeno–dioritic pluton crosscut the blocks of the volcanic and volcaniclastic rocks, serpentinite, radiolarian chert, and shale in the Ankara Mélange and also, the alkaline lavas cover the rock blocks in the Ankara Mélange, - the oceanic crust basalt samples have Nb/Y (0.1–0.4) and Zr/Nb (8.1–32)

C758

values. They are not island arc basalts, -the articles (Rock, 1977; 1984) suggested by Prof. Dr. Furnes have been read.

Ender Sarifakioglu
