Received and published: 26 December 2013

We thank the referee for his/her constructing comments regarding our article. We have undertaken a minor review taking into account the minor changes suggested by the referee. Specifically, the new version of the article includes more references. These new references take into account the comment of the referee to deepen our discussion in relation to phytostabilization, phytotoxicity and the interaction between biochar and heavy metals. Thus, the new version of the discussion, including these new references, is more detailed compared to the previous one. Table 2 has been divided into Tables 2 and 3 to facilitate the distinction between studies using biochar (with or without edible crops present) and studies focused in the combination of phytoremediation and biochar. In addition, we have also altered the structure of the article to take into

C795

account the comments of referee 1 and 2.
