

## ***Interactive comment on “Effective buoyancy ratio: a new parameter to characterize thermo-chemical mixing in the Earth’s mantle” by A. Galsa et al.***

**Anonymous Referee #1**

Received and published: 3 October 2014

Dr. Paul Tackley suggested that “I recommend acceptance after several things has been addressed.” However, in Acknowledgements section of the original manuscript by Dr. A Galsa et al. (MS# se-2014-75), the authors remarked that “the authors are grateful to Paul J. Tackley for his constructive remarks,” which means that Dr. Tackley read this original manuscript in advance. I think that it is unfair to me, and therefore his review is invalid.
