Revision Notes

Dear Natascha Töpfer
Copernicus Publications
Editorial Support

Nov. 22, 2014

Greetings;

Referring your e-correspondence appending with reviewers report on my manuscript entitled "**Scale effect on runoff and soil loss control using rice straw mulch under laboratory conditions (se-2014-96)**" by S.H.R. Sadeghi et al., here, I am very pleased to submit the revised version of the aforesaid manuscript. The manuscript was thoroughly revised based on respected reviewer's comments and suggestions and accordingly were addressed point by point. I found comments and suggestions very of use to me and therefore were entirely incorporated in the revised version one by one.

- About, the statistical analysis has to be explained with detail.

It was done.

- About, problems in abstract, introduction, results and discussion and Tables

All of problems in abstract, introduction and results and discussion were done in the text with red color.

- What do you mean with 3 replicates? That you carried out the experiment 3 times in each plot?
(Page 5 Line 8)

Each control and straw mulch done in 3 replication with 2 rainfall intensities (all of treatments were 24).

- Page 6: Line 4: What do you mean with “Climatologicalcondition”

Kojour with longitude $51^{\circ} 44'$, altitude $36^{\circ} 23'$ and height 1550

I hope the emendations caused to consent the respected reviewers and editor and made my paper well qualified for publication. The acknowledge receipt of the same and informing me about the final status of the paper is appreciated.

Sincerely,

S.H.R. Sadeghi
