This article is devoted for investigation of soil organic matter in different Antarctic soils and urgent for current Polar science in context of global warming and carbon stocks assessment. Nevertheless, I want to make following suggestion to the authors of the text: in Abstracts please change "pedological investigations" to "soil surveys"; References p. 881 line please type cryosols by a capital letter C - Cryosols and at line 25 "western Antarctic" should be Western Antarctica; name of Fig 2 should be changed to "Photos of selected soils".
