We really appreciate your detailed technical and syntax comments on our study. They will help to improve the manuscript of our research mainly in two directions. On the one hand, it improves in completeness and clarity with the inclusion of additional information in the description of the method. On the other hand, it gains in richness and accuracy by explaining better the limits of the results. We have written each answer followed by the re-phrased text (between quotation marks) just below to each comment written in bold. The replies are in the supplement pdf file.
