

***Interactive comment on “Dedradation of buried ice and permafrost in the Veleta Cirque (Sierra Nevada, Spain) from 2006–2013” by A. Gómez-Ortiz et al.***

**Anonymous Referee #2**

Received and published: 27 June 2014

The paper "Dedradation of buried ice and permafrost in the Veleta Cirque" highlighted the climate sensitivity of the peaks of the Sierra Nevada to the effect of climate change . The manuscript is well structured and the topic interesting .

Few comments are reported in pdf file . I suggest to focus more attention in the discussion or in conclusion on the impact of the climate sensitivity of the peaks of the Sierra Nevada on the dynamics of ecosystems.
