Objectives should be separated in a new paragraph at the end of the introduction section.

Page 2377, lines 20-22: The three 20 m x 20 m and five 1 m x 1 m plots were selected randomly, but how? Using randomly generated coordinates or any other process?

Page 2378, lines 1-2: I suggest re-writing depth classes: 0-10, 10-20, 20-30, 30-50, 50-100, 100-150 and 150-200 cm. Much more easy to understand.
