Interactive comment on “Features of the Earth surface deformations in Kamchatka peninsula and their relation with geoacoustic emission” by I. A. Larionov et al.

G. P. Gregori (Referee)

giovanni.gregori@idasc.cnr.it

Received and published: 23 September 2014

I thank the authors for their reply.

I want to stress that I sincerely appreciate their study, and that in no way I ever wanted to make any criticism.

Rather, I tried to contribute with some constructive argument in order to trigger a better feeling about the need for expanding our concern from a mere repetition of conventional seismological techniques towards some innovative and more astute, eventually provoquing, approach.
