Dear authors,

I find your manuscript of interest, especially the approach of the WOCAT questionnaires. However, and as I see it, it looks more a report than a research paper. You apply the WOCAT approach to an specific area with an specific problem which makes it difficult to extrapolate to international studies.

I would like to highlight two things:

- 1)Lack of references in the discussion section (as I said, as it is now it looks more of a report than a research paper)
- 2)Figure 2. Both two graphs need and increase in their resolution

C1332

3)Figures 3 and 4. From the engineering point of view, those figure are not suitable for publication I am afraid. You need to refer them to a scale and give information about the dimensions.
