Interactive comment on “Rainfall and human activity impacts on soil losses and rill erosion in vineyards (Ruwer Valley, Germany)” by J. Rodrigo Comino et al.

J. Rodrigo Comino et al.

s6jrodr@uni-trier.de

Received and published: 5 March 2015

We appreciate the positive recommendations and opinions of our manuscript. The final version will include these modifications.

Specific comments: a) We will improve all incorrect English expressions and unclear sentences in the text, including the tables and figures. b) In regard to the final recommendation, we will include both values: i) assuming the erosion rates of the young vineyards for the results in the old vineyards (1 year measured + 34 years); ii) like an independent measure. c) The following new aspects for the discussion will be included: influence of organic matter, surface components, soil tillage, etc.
