Dear Authors, In the paper submitted for review You have presented the results of original research conducted in real-world conditions in a municipal landfill. Presented research constitutes a source of scientifically important information. After reading I have a few questions and comments (to: sed-7-C1520-2015-supplement[1]): - when the study was conducted? - please mark the section of the landfill in Fig. 1. - in the text You wrote (p. 6, row 29-30) that in Table 1 are presented average values. The table shows the findings from individual samples, no mean values. If, however, there are average values, how much was trial and when they were collected? - in Fig. 2 should be described a horizontal line on the charts of the content of Cd, Pb, Cu, Zn, Co, Ni, Cr. If the graphs shows the values in Table 1, the table is not needed. Should change the

C1713

title of the drawing, does not explain why introduced a horizontal line. - Table 2 shows the detailed results of research, which are compiled in Table 3. More understandable is Table 3. - after the introduction of amendments will be necessary changes in the text. The paper should definitely be published after minor corrections.
