Received and published: 10 February 2016

We really thankful to the reviewer for suggesting the articles related to land degradation and desertification to enhance the legibility and quality of our paper. We will definitely include the fact that “the effects of desertification change the natural earth systems cycle, which ultimately affect the vulnerable population of dryland” in the introduction as suggested. The process of desertification will also be further discussed in the introduction with the help of suggested papers.
