

Interactive comment on “Reducing sediment concentration and soil loss using organic and inorganic amendments at plot scale” by S. H. R. Sadeghi et al.

Anonymous Referee #1

Received and published: 10 February 2015

The manuscript of Sadeghi et al., focused the effect of mulches on Sediment loss at different rainfall intensities. The experimen is well structured , but there are not new concept, idea or methods. The results are repeated many times in the manuscript, tables , figures and discussion. In the conclusion the results are repeated again, and there are not explained the implication of this research. Further comments are highlighted in the pdf file.
