After careful consideration of your manuscript “Revisiting the statistical analysis of pyroclast density and porosity data”, based on the two reviews, my decision is that this contribution requires moderate revision before it can be accepted in Solid Earth. The reviews are very constructive and highlight a number of ways by which the manuscript can be improved. I think that the paper can be vastly improved by considering their content. Please now address these comments in the form of a rebuttal letter, and upload your revised manuscript.
