

Interactive comment on “Effects of pumice mining on soil quality” by A. Cruz-Ruíz et al.

Anonymous Referee #1

Received and published: 15 May 2015

The paper focus on the effect of pumice mining on soil quality, evaluating some indicators of land degradation. The paper is well structured and very few studies have investigated the soil of pumice mines, even if the approach is not very innovative.

The manuscript could be accepted after minor revision I suggest to change some table with figures to be more attractive. Improve the discussion (see the pdf file) Other suggestions in the pdf file.
