Dear Referee#2, Thank you for your opinion, suggestion and references. I think that the changes I've made thanks to your suggestions have improved my paper.

I edit the language and the result section; I make changes in the Discuss section writing a conclusion.

I don't delete the basic info because I consider them important to frame the study and to make the reading easy also for readers who don't know these themes. I refer to “components of the ecosystem” as to all the lifeforms in an ecosystem.

C748

Detailed comments I edit the results and discussion section following your suggestion as you can see in the supplement file in which the major corrections are in red color.

I think that all the tables and figures are important for the paper and I edit results section describing in a clear way what refers to the tables. To make legends for figures 1 and 2 makes difficult the reading of the figures; what is important in figures is to evaluate the different trends of the curves.

Regards, Chiara Cassinari
