

Interactive comment on “Impact of land management system on crop yields and soil fertility in Cameroon” by D. Tsozué et al.

Anonymous Referee #2

Received and published: 21 July 2015

Dear authors and editor The paper SE 2015-47 could be of great interest and applied science, but the quality of the manuscript is not good. After major revision the paper could be reconsidered for publication .

In the pdf file and below you find my comments:

- 1) The introduction is too general and it does not focus on the aim of the work. My suggestion is doing a state of art about different soil management in semiarid soils.
- 2) the results are too long and the same data are repeated many times.
- 3) In the discussion is not clear which was the effect of fertilization and seeding on soil.
- 4) Miss statistical analysis in the table 3 and 4, therefore is difficult comment these data

C885

- 5) In my opinion the fig 3 is not necessary. the R2 is too low.

Please also note the supplement to this comment:
