

## ***Interactive comment on “Physical soil quality indicators for monitoring British soils” by Ron Corstanje et al.***

### **Anonymous Referee #2**

Received and published: 1 January 2017

The methods including the three steps to selecting SQI should be clearly stated.

Why were only three SOIs been discussed? how about others?

Was six or seven SQIs were determined at last?

Some critical tables should be listed in the manuscript instead of in supplementary categories.

How to use these selected SQIs to quantify British soil quality should be added to the manuscript.
