Received and published: 9 February 2017

Dear Dr Kovaleva,

Thanks for submitting your manuscript to Solid Earth. I have now received two reviews. Both reviewers agree that this is a valuable contribution that should eventually be published. However, both agree in that the manuscript is poorly structured and that it requires major revision to get the message across succinctly and clearly. I ask you to revise the manuscript avoiding all repetition and that you restructure the discussion according to Rev 2. In particular describe the events in linear progression from the

C1

early stages to the late stages. This amounts to a major revision.

The reviewers provided detailed comments directly on the pdf copies of the manuscript and this should help you in producing a final version. I am convinced that by removing repetition and chaotic structure, this paper could achieve a lot more. Some times less is more. Please go carefully through the reviewers comments and resubmit a much shorter article. At that point I will resend it to review, as per the suggestions provided.

Many thanks Roberto Weinberg
