The paper has an interesting idea and focuses on an important field in agriculture and soil studies. Anyway it needs some revisions which is as following: The introduction is well written and is fine. but about the study area it is better to show a full map which show the location of the study area in country and give some more information about it..spatially the lands and things like that

The structure of sections is fine.but about the method the sample points are not spreaded well, please tell us how the sample points are collected?

C1

quality of maps are fine and it is good.But there is some spelling mistakes which should be reviewed

with kind regards
