Comments to the Author, I am interested in this study about "Vegetation greenness response to water availability over Northern China from 1982 to 2006". The subject considered is an interesting one and the paper is well organized. The introduction gave a satisfactory literature survey on the similar topic and it outlined the proposed method well. Appropriate figures were given to make the paper understood easily. So I advised this paper should be accepted for publication in this journal. But there are two small issues that need to be noticed. 1. Title and abstract adequately represent the content and the conclusions of the paper. Illustrations are all necessary and of good quality. However, try to use keywords that are not included in the paper title and check

for any syntax errors that mislead the reader. 2. There are a few references are not in the correct format. Please remedy these defects in order to satisfy the format of this journal.
