Interactive comment on "sUAS and their application in observing geomorphological processes" *by* Jozef Gallik and Lenka Bolešová

Anonymous Referee #1

Dear Dr. Gallik

The paper that you submitted to Solid Earth is very much confusing. it is not a research paper or a review paper, is just an explanation of your experience (not facts, or data) mixed with some previous works. I think that in the present condition, the paper has to be strongly reviewed and be and show clearly if this is a research or review paper. If a research paper, it is important to show more data, not only photos. If a review paper, a deeper literature analysis is required,
