

Interactive comment on “Folding and necking across the scales: a review of theoretical and experimental results and their applications” by Stefan Markus Schmalholz and Neil Mancktelow

D. nbsp;W. Schmid

d.w.schmid@geo.uio.no

Received and published: 11 July 2016

We would like to thank the authors for collecting the main aspects of this broad topic in one single paper. It reads well and will certainly become a resource on which much further work will build upon. We have a major comment regarding the representation of our large amplitude folding (LAF) model and some minor comments regarding other issues. You find these comments in the attached PDF.

Best regards,

Dani Schmid, Marta Adamuszek, and Marcin Dabrowski
