Thanks for your some valuable suggestions for the manuscript of sewage irrigation in China. Why we wrote this review of sewage irrigation in China farmland. Most of readers at abroad did not know applications of sewage irrigation in China currently. I have done some relative work for 30 years in China. The most potential place using sewage irrigation is China, we must understand the history and current situation and make better use of it in the near future. Now the Chinese government has adopted some regulations and laws, so some suggestions we gave are useful and exert some impacts on some developing counties facing water deficit.
