

## ***Interactive comment on “Impacts of sewage irrigation on soil properties of farmland in China: A review” by Qiangkun Li et al.***

**Anonymous Referee #2**

Received and published: 18 November 2017

Here is the content of the manuscript in a nutshell. 1. Sewage and other wastewater has been applied without proper treatment. 2. The observed consequences that are well known from the experience of other regions or countries. The Government must develop and enforce regulations with clear reward and punishment.

There is no specific information that the Government could use to develop the regulations.

the only novelty in the manuscript is the geographic region. In my opinion, there is no reason to publish this work on an international journal, since an international reader will not find any new concepts, technologies, or observations.
