Received and published: 17 November 2017

This manuscript reviewed the impacts of sewage irrigation on soil physicochemical properties and biological characteristics of farmland in China. The objectives of the review are clear. Sewage irrigation may cause organic and inorganic environmental pollution. The proposals in the manuscript have certain guiding significance in reasonable use of wastewater irrigation in China. However, the authors need to improve the manuscript, especially on the introduction part, as much useless information in this section. The authors should cite more English references in the paper. In addition, English should be polished by native speakers.
