Received and published: 13 August 2017

Dear Manuel Queißer,

As you have no doubt seen, I have now received two reviews of your manuscript "Increasing CO₂ flux at Pisciarelli, Campi Flegrei, Italy". Both reviewers offer constructive comments and recommend publication following revision. Please now prepare a revised manuscript and point-by-point rebuttal letter. Please pay particular attention to the comments by reviewer #2 related to the "pros and cons" of the LARSS method. I look forward to reading your revised manuscript.

Thanks,

Mike Heap (Topical Editor of Solid Earth)
