Interactive comment on "Revegetation in abandoned quarries with landfill stabilized waste and gravels: water dynamics and plant growth – a case study" *by* Cheng-liang Zhang et al.

Anonymous Referee #2

a. (h) P 24 Line 476, the Slit may be changed to Silt; and the adding of its unit, i.e. mm. I suggest you may add "mm" after the range of silt size (0.002-0.05 mm, %)

b. (k) The adding of description of physical soil appearance over time to add the discussion qualitatively. I do understand your explaination. May I suggest you to write the qualitatively descriptive observation of the appearance of the soil over time. It will give the readers "the evolution" or the changing of the soil.

Good luck.
