Received and published: 27 October 2017

Dear Lucia Gurioli,

As you have no doubt seen, I have now received three reviews of your manuscript "Integrating field, textural and geochemical monitoring to track eruption triggers and dynamics: a case-study from Piton de la Fournaise". All three reviewers were positive, but all recommended that the paper is slightly reconstructed/rejigged to improve clarity and therefore the impact of your manuscript. This is always a challenge for data-rich contributions. Please pay particular attention to these comments when preparing your revised manuscript.

Please now prepare a revised manuscript and point-by-point rebuttal letter. Addressing the comments of the reviewers will no doubt help improve your manuscript. I look forward to reading your revised manuscript.

Thanks,

Mike Heap (Topical Editor of Solid Earth)
