Received and published: 30 January 2019

With this comment, we would like to acknowledge that the seismic reflection profile appearing in Figs. 10c-e, 12, and S3 was reprocessed by Spectrum Geo Ltd (www.spectrumgeo.com). For mere formal error, the Spectrum logo was not displayed in these figures. Therefore, new PDF files for both the main manuscript and the supporting material have just been uploaded by the Editorial Staff of Solid Earth and are now available in the Interactive Discussion. These new files show the correct version of Figs. 10c-e, 12, and S3 (i.e., with the Spectrum logo). These figures are the only items changed as regards the previous version. We apologize for the inconvenience.
