Dear Prof Laubach,

We are delighted for your supportive comment that you provided on our manuscript. We have included you in our response to reviewers document, as reviewer 3 (Please see RC reply's). Although many of the suggestions were clearly important, we often felt them beyond the scope of this contribution. Many of these points should be targets of research for the fracture community in the future. We included some of the key relevant points into our revised manuscript, and i would like to thank you again for the support shown to our work,

Kind regards, Billy J Andrews
