Received and published: 31 May 2018

Dear authors,

As you can see, I've now received three reviews of your manuscript: "Generating porosity during olivine carbonation via dissolution channels and expansion cracks". The reviews are generally positive. If you're willing, please now prepare a point-by-point rebuttal letter to address the concerns of the three reviewers and a revised manuscript (preferably with the changes highlighted). In your revised manuscript, please pay particular attention to explicitly highlight the similarities/differences between this manuscript and Zhu et al. (2016).

Thanks for submitting your work to Solid Earth.

Mike Heap (Topical Editor of Solid Earth)
