Dear authors,

As you can see, I've now received two reviews of your manuscript "Syn-kinematic hydration reactions, dissolution-precipitation creep and grain boundary sliding in experimentally deformed plagioclase - pyroxene mixtures". The reviews are generally positive, but both highlight areas in which in the manuscript could be improved. Reviewer #1 asks for some "scene setting" and a deeper discussion of the data, and Reviewer #2 thinks the manuscript would benefit from a more detailed discussion of the porosity evolution. I agree with their assessments. If you are willing, please now prepare a

revised manuscript (with all the changes to the manuscript clearly highlighted) and a point-by-point rebuttal letter.

SED

Thanks for submitting your work to Solid Earth.
