Thanks for the hard work put to handle the manuscript.

I am very excited about the second review, it makes almost the perfect example for why an open review process should be the norm for all journals. I detailed reply to review#2 is on its way, coming up in few days.

The manuscript will be revised accordingly and resubmitted, it will take a bit more than few days though, but hopefully in the meantime there will be more discussion posted online, I am all in, would that be possible?

C1

Another round of review sounds perfect to me!

My apologies for extending the editorial burden for this manuscript, but I strongly believe that it is worth it.
