Received and published: 25 February 2020

Dear authors,

After reading your response to reviewer 2’s comments, I would like to echo their first comment. I understand the Vsv and Vsh models are shown in Figure 8. However, the anisotropy itself is not discussed in the paper, but I believe a (short) discussion of how it could be interpreted and its resolution would be valuable since it is a product of the inversion.

Best regards,

Caroline Beghein
