Dear professor Marc Oliva! thank you for your comments. We feel that these comments are very useful for further work with paper. Here you can find our comments for every comment of yours: -English language, grammar and spelling will be corrected in reworked version of paper -the main findings of this paper is that we have found new lithological and geomorphological indicators of glacial presence on the territory of Western Siberia, this fact was quite uncertain and still is under discussion for this particular macrolandscape. -introduction chapter will be reworked with aim to summarize current discussion points and history of geomorphological and lithological investigations,

C1

devoted to glacial history in Western Siberia -paper will be supported by additional data on stratigraphic columns and discussion of boulders and signatures of moraine genesis of territory -an extended map of glacial forms of relief will be given in final version of paper. The correlation of terms and definitions will be given according to those, which has been used in Great Britain and Canada.
