Dear professor Marc Oliva! thank you for your comments. We feel that these comments are very usefull for further work with paper. Here you can find our comments for every comment of yours: -English laguage, grammar and spelling will be corrected in reworked version of paper -the main findings of this paper is that we have find new lithological and geomorpological indicators of glaciation presence on the territory of Western Siberia, this fact was quite uncertain and still is under discussion for this particular macrolandscape. -introduction chapter will be reworken with aim to summarize current discussion points and history of geomorphological and lithological investigations,

devoted to glaciation history in Western Siberia -paper will be supported by additional data on stratigralhy collunms and discussion of boulders and signatures of moraine genesis of territory -an extended map of glacial forms of relief will be given in final version of paper. The correlation of terms and definitions will be given according to those, which has been used in Great Britain and Canada.
