I read this discussion paper with interest and this paper is mainly for providing a concept of history of environment and landforms formation though lithological basis as an example of Quaternary marine sediments of northern Western Siberia. Authors took a lithological column from lower parts of Nadym River and analyzed shape and morphology of quartz grains, some features of glacial processes. However, I think the details of digital terrain models are not adequate and how it was used in this study and for other studies. Author needs to put more information concerning this model and discuss further. Besides, the language should be revised majorly and many sentences need to be
