Interactive comment on "Lithological and geomorphological indicators of glacial genesis of the upper Quaternary strata in the lower courses of the Nadym River" *by* Oleg Sizov et al.

Leonid Perelomov

perelomov@rambler.ru

The paper provides convincing arguments for the fluvioglaciall origin of sediments in the Nadym river valley. Despite the fact that there are different reasoned points of view on the genesis of these deposits, the paper gives impetus to their further study and discussion. It is necessary to use other methods, including chemical, to determine the origin of these deposits.
