Received and published: 29 March 2019

I carefully read the paper by Milano et al. and I found it an interesting contribution which I recommend for publication. The authors aim to solve the controversy regarding the interpretation of large-scale anomalies in Central Europe, which will impact on other studies regarding orogeny and general tectonics. This topic is such is of broad relevance. I am attaching a list of minor points in an annotated manuscript for some further clarification.
