Thank you very much for your in-depth review of our manuscript. We have incorporated a lot of your input and believe that the paper has significantly improved in quality. We have added a definition of what we define as seismic data quality within the context of seismic interpretation, significantly improved the Figures according to your recommendation and have added all information we have about the seismic dataset. We have also added a summary section to the end of the manuscript to provide the reader with a clear take-away message.
