I had the privilege to review the article “ Hydrocarbon accumulation in basins with multiple phases of extension and inversion: examples from the Western Desert (Egypt) and the Western Black Sea” Prepared by William Bosworth and Gábor Tari Discussion about inversion and its effects is very interesting, and it has a practical importance and huge impact in HC Exploration. Combining two different, geologically complex basins over the big distance authors highlighted the correlative events especially related to inversion, and similarities rather than differences during their geological history and evo-

lution. Looking for analogs was always not a simple task, while someone really needs deep regional geological knowledge. On the given examples from Western Desert in Egypt and Western Black Sea the wider G&G community can only benefit from. Budapest, 28th July 2020.
