Received and published: 3 August 2020

The comment is well written and illustrated. The authors discuss their disagreement with the model proposed by Urbani et al. (2020) in four sections, providing strong arguments and field-based evidences that show their detailed knowledge of the geology of the area. The style is polite and the arguments are fully backed by graphical material and/or references. Accordingly, I consider that the comment can be published as is.
